

# SHAIK FIRDOS

## Python Full-Stack Developer

✉ shaikfirdos340@gmail.com 📍 Hyderabad, India 🔗 LinkedIn 🐙 GitHub

### SUMMARY

Python Full-Stack Developer with hands-on experience building production-grade web applications using Django, FastAPI, and React. Proficient in designing scalable REST APIs, microservices architecture, and AI pipelines with LangChain, RAG, and LLM integrations.

### WORK EXPERIENCE

#### Backend Developer Intern

12/2024 – 04/2025

Brainovision Solutions Pvt. Ltd.

- Engineered a RESTful Python/Flask API to serve a real-time machine learning model, configuring Flask-CORS to guarantee seamless and secure cross-origin JSON data transmission with the React frontend.
- Integrated a scikit-learn Random Forest Classifier into the backend architecture, utilizing Pandas for real-time data processing and one-hot encoding to accurately categorize incoming network traffic parameters as Normal, DoS, or SQL Injection attacks.

### EDUCATION

#### B.Tech – CSE

2022 – 2025

Sree Venkateswara College of Engineering, Nellore

Nellore, India

CGPA: 7.9 / 10.0

#### Board of Intermediate

2019 – 2021

Narayana Junior College

Nellore, India

CGPA: 8.8 / 10.0

### TECHNICAL SKILLS

**Languages:** Python (Proficient) | JavaScript | TypeScript

**Backend:** Django | DRF | FastAPI | REST API Design | Microservices | Flask

**Frontend:** React | Vite | Tailwind CSS v4

**DevOps & Tools:** Git | GitHub Actions (CI/CD) | Linux

**AI / ML:** LangChain | LangGraph | CrewAI | RAG | AI Agents | Prompt Engineering | HuggingFace | Groq | OpenAI

**Databases:** PostgreSQL | MySQL | ChromaDB | Pinecone | FAISS | JWT Auth | Token Blacklisting

### CERTIFICATIONS

#### AI/ML Prime, Apna College

- Mastered foundational and advanced AI architectures** through an intensive 6-month engineering cohort, applying Python data preprocessing, classical ML frameworks, and Deep Learning to build GenAI workflows utilizing RAG and OpenAI API integrations.
- Developed autonomous AI agents and automated workflows**, leveraging multi-agent orchestration, function calling, tool-use, and prompt optimization to drive performance and execute complex generative AI tasks.

### PROJECTS

#### Bus Matrix, Scalable Transit Intelligence Engine

Django | React | MySQL | Tailwind CSS v4 | JWT | OSRM | Geopy

- Architected a scalable route-mapping model for TGSRTC networks, reducing DB redundancy by 40%, improving query speed by 35%, and achieving sub-200ms MySQL latency with a React dashboard.
- Containerized the application using Docker and deployed the microservices architecture to AWS (EC2), establishing an efficient, repeatable deployment workflow

#### SignalReport, Enterprise AI News Analyst

Django | FastAPI | PostgreSQL | React | LangChain | RAG | ChromaDB | Llama 3.3 | Groq

- Built an autonomous AI agent pipeline leveraging Llama 3.3 and Groq with a full RAG stack (ChromaDB, Pinecone, FAISS, OpenAI Embeddings) for semantic memory and context-aware news intelligence.
- Designed microservices architecture with Django REST API and FastAPI for LLM tool execution, backed by PostgreSQL with JSON-schema guardrails ensuring 100% data consistency and 99.9% uptime under high concurrency loads
